

HERZOG

GIS Services

Herzog has developed a wide range of survey and data processing services to assist in everything from PTC data integration to visualizing railroad networks and assets for our customers. Our GIS services provide our customers with a deeper understanding of their territories and enable them to keep pace with the changing industry.

Innovation that Delivers

Herzog GIS professionals provide expertise in on-track surveying of railway corridors and data processing. The expansion of our survey fleet and application of new technologies addresses emerging challenges both within and outside of the railway industry. The GIS team is best described as a balance between people, technology, and process.

10,000 Herzog-Supported Miles in 2021 across North America
